

PAH Update

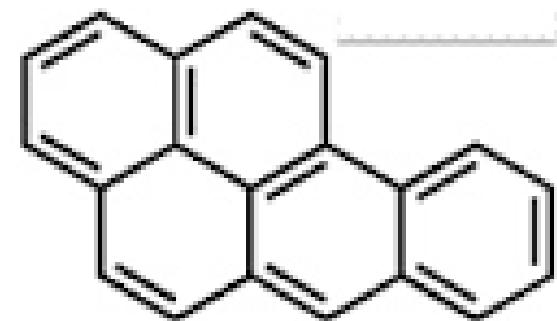

GET READY TO
PAH!

CHANGES TO SOIL STANDARDS

- 1. NEW B(A)P TOXICITY LEVELS**
- 2. NEW EXPOSURE ASSUMPTIONS**
- 3. PAH CUMULATIVE ASSESSMENT**
- 4. PAH BACKGROUND STUDY**

Benzo[A]Pyrene

1. New BaP Toxicity Levels

- DNR non-industrial direct contact RCL increased from **15 ppb** to **115 ppb**.
- DNR industrial direct contact RCL increased from **211** to **2,110 ppb**.
- DNR groundwater protection RCL did not change.

2. New Exposure Assumptions

Download from
Dreamstime.com

This watermarked comp image is for previewing purposes only.

2. New Exposure Assumptions

- Exposure assumptions changed.
 - Standard person was 70kg, now 80kg
 - Larger people = More surface area
 - Changes residences more frequently
- Will affect all compounds on soil standard spreadsheet
- Results in less than 10% difference in calculated RCL values

NR 720 Soil Standards

What's Next?

- PAH Cumulative Assessment
 - Changes to the RCL Spreadsheet
- PAH Background Study

3. PAH Cumulative Assessment

DHS determined cPAHs:

- Are always found as a mixture of cPAHs, never independently.
- Toxicologically, cPAHs act in an identical manner on humans.

DHS concludes it is appropriate to assess cPAHs on a cumulative basis.

New Information from DHS

- NR 720.12(1) target excess cancer risk thresholds:
 - 1×10^{-6} for individual compounds, and
 - 1×10^{-5} for cumulative risk

PAH Cancer Risk – cPAH Compounds

- Benzo(a)pyrene
- Dibenz(a,h)anthracene
- Benz(a)anthracene
- Benzo(b)fluoranthene
- Ideno(1,2,3-cd)pyrene
- Benzo(k)fluoranthene
- Chrysene
- Naphthalene
- 1-methylnaphthalene

cPAHs
Cumulative Risk

cPAHs
Individual Basis

New Information from DHS

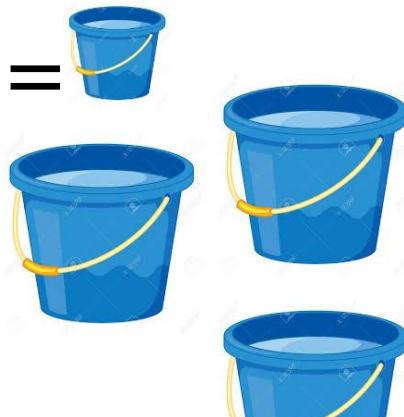

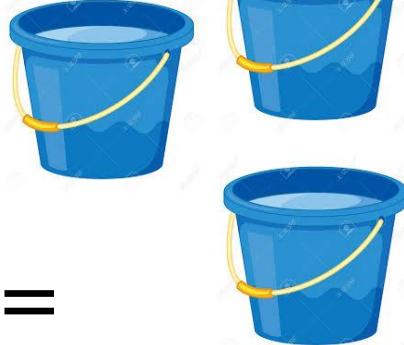

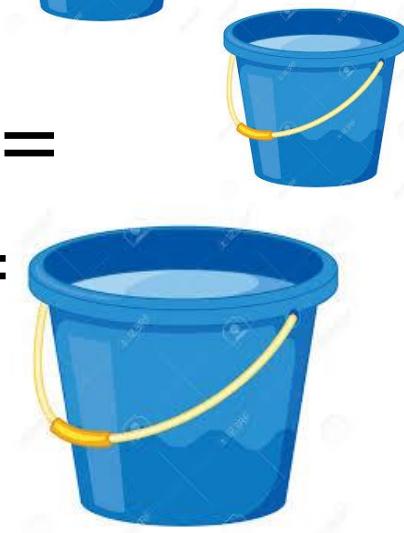

- Risk-based approach allowed under NR 722.11(1)(b) when attaining compliance with the RCLs in NR 720 is not practicable.
- Proposed Approach:
 - Allow for cumulative assessment of 7 cPAHs using a modified RCL spreadsheet.
 - Develop a cumulative, non-industrial RCL threshold that is less stringent than individual RCLs, but still protective.

PAH Cancer Risk

- Cancer Risk for Benzo(a)pyrene =

PAH Cancer Risk

- Benzo(a)pyrene = 
- Dibenz(a,h)anthracene = 
- Benz(a)anthracene = 
- Benzo(b)fluoranthene = 
- Ideno(1,2,3-cd)pyrene = 
- Benzo(k)fluoranthene = 
- Chrysene = 

cPAH Cancer Risk

**7 cPAH
Total
 5×10^{-6} Risk**

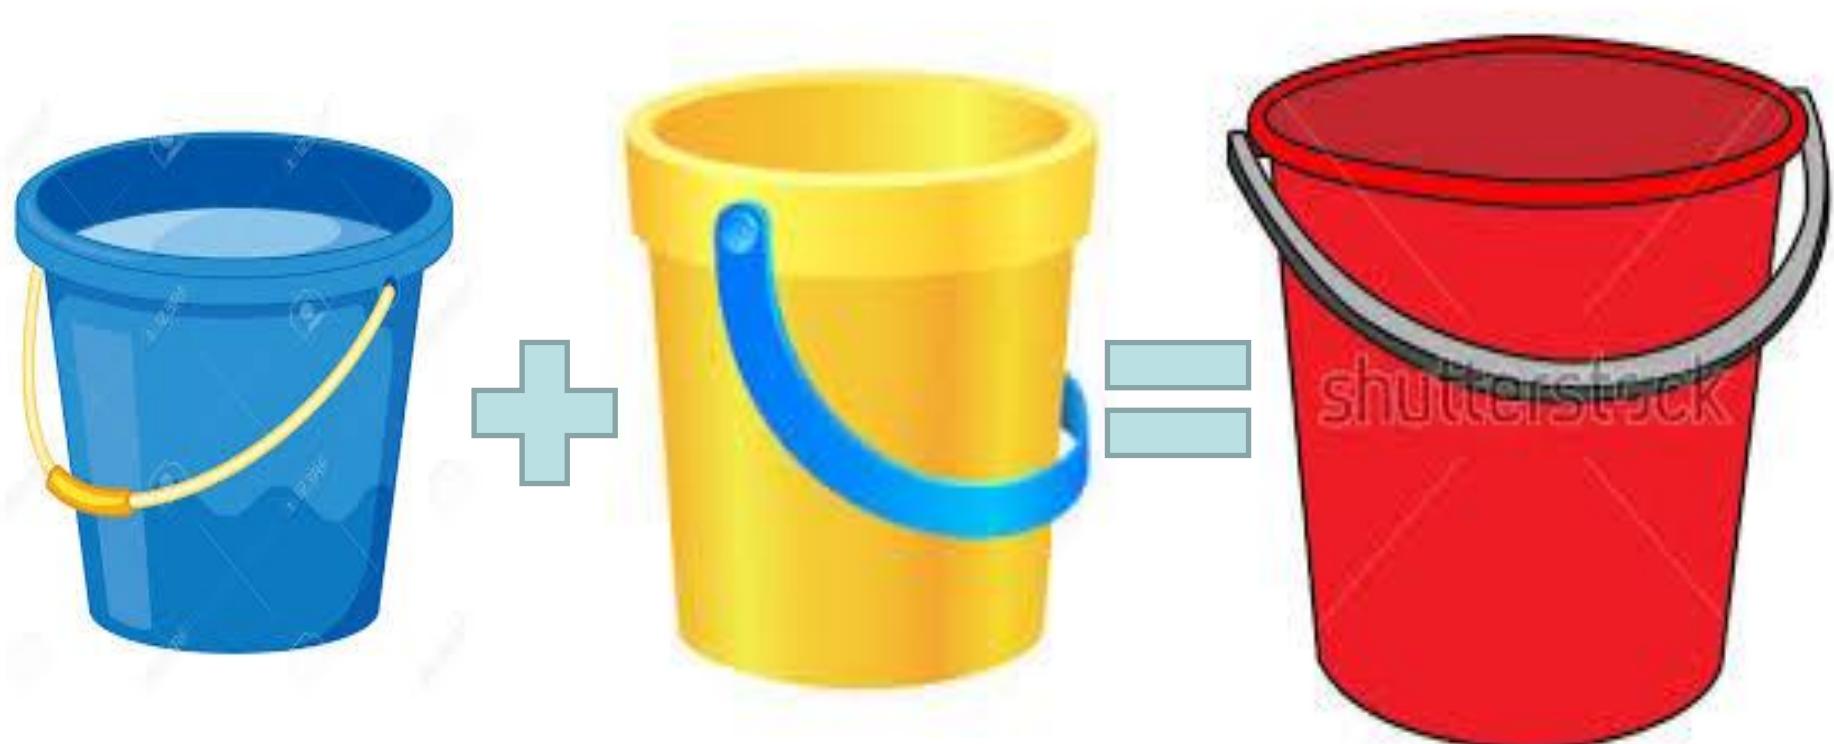

cPAH Cancer Risk

Why use only half of the 1×10^{-5} cumulative excess cancer risk at this time?

- Only 7 cPAHs included now.
- More potent cPAHs known.
- Additional potent compounds reduces “effective B(a)p concentration” within cumulative total.
- Half the cumulative risk “bucket” held in reserve:
 - for future compounds
 - changes in risk of current compounds

Total Cancer Risk

7 cPAHs

Non “7 cPAH”
Carcinogens

Total
Carcinogens

Total Cancer Risk

**Total
Carcinogens
 $= 1 \times 10^{-5}$**

3. PAH Cumulative Assessment

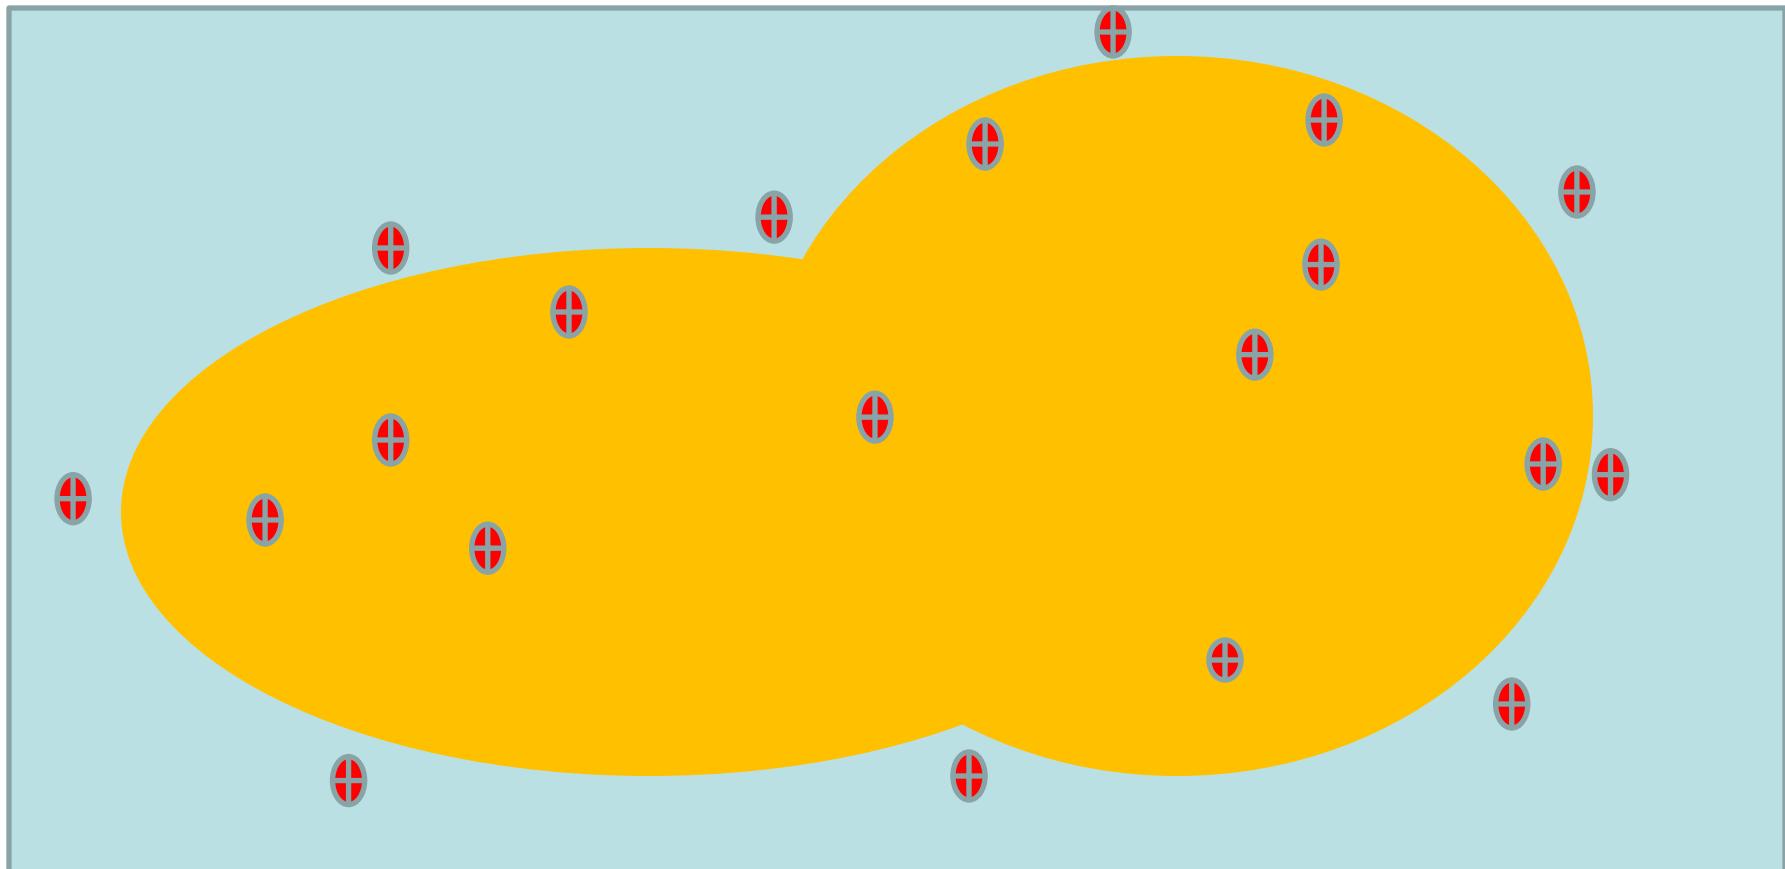

What will change?

- Non-industrial Direct Contact RCLs

What will not be affected:

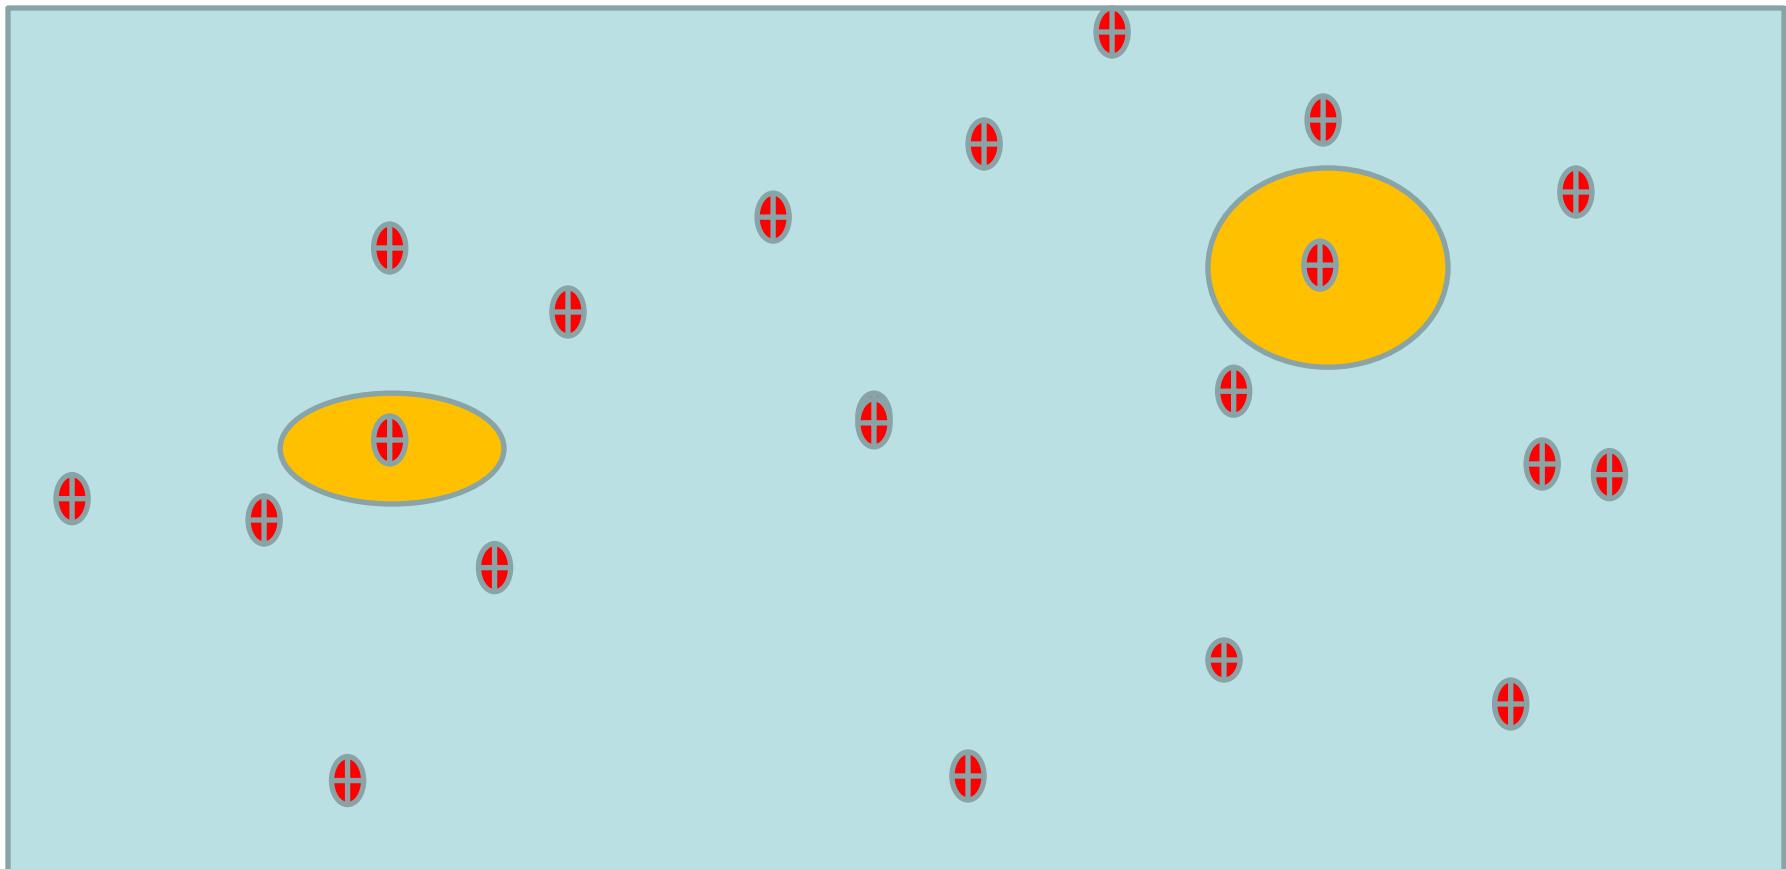

- Non-cancer risk summation
- Industrial Direct Contact RCLs
- Groundwater Pathway RCLs
- Total cumulative risk for all carcinogenic compounds

3. PAH Cumulative Assessment

Example Site – Cap area with current RCLs

3. PAH Cumulative Assessment

Example Site-Cap area with proposed RCLs

3. PAH Cumulative Assessment

- Risk-based approach allowed when attaining compliance with the RCLs in NR 720 is not practicable.
- Modified RCL spreadsheet proposed
- Process out for public comment

PAH BACKGROUND STUDY IN MILWAUKEE

4. PAH Background Study

- Shallow soil samples collected in Milwaukee County parks.
- Samples analyzed for PAHs.
- Determine background threshold value for PAHs originating from atmospheric deposition.
- Use findings to guide site remediation requirements.
